

TOWN COUNCIL AGENDA

Regular Meeting – January 3, 2017

7:00 PM
TOWN COUNCIL CHAMBERS
Town Hall – 505 Silas Deane Highway

Pledge of Allegiance
Recording of Attendance by Town Clerk

A. PUBLIC COMMENTS

1. **Hearings:** None.

2. **General Comments**
 - a. Public
 - b. Council Reports
 - c. Council Comments
 - d. Town Manager's Report
 - e. Town Clerk Communications

B. COUNCIL ACTION

The Chairman may indicate those matters of unfinished business to be considered.

1. **Ordinances, Resolutions and Appointments for Action**
 - a. Acceptance of Resignations from Boards and Commission
 - b. Appointments to Boards and Commissions

2. **Unfinished Business:**

3. **Other Business:**
 - a. Presentation by VHB, Inc. (Vanasse, Hangen, Brustlin, Inc.) on the Pavement Management Road Resurvey for the Town of Wethersfield.
 - b. Acceptance of Capital Area Substance Abuse Council Grant for the Wethersfield Youth Advisory Board.

4. **Bids:**
 - a. Unleaded fuel for 2017.

5. **Ordinances, Resolutions and Appointments for Introduction:** None.

TOWN COUNCIL AGENDA
Regular Meeting – January 3, 2017

6. Minutes

- a. December 19, 2016

Citizens are able to review minutes for Town Boards and Commissions at:
<http://wethersfieldct.com> - use the Agendas and Minutes tab on the right side

7. Public Comments:

8. Adjourn.

APPOINTMENTS TO BOARDS AND COMMISSIONS

INLAND WETLANDS AND WATERCOURSES COMMISSION – to fill a Vacancy

Roger Muscillo	R	200 Meadow View	1-3-17 to 6-30-17
----------------	---	-----------------	-------------------

ZONING BOARD OF APPEALS - Alternate

James Reilly	R	94 Midwell Road	1-3-17 to 6-30-20
--------------	---	-----------------	-------------------

Proposed by – Mike Hurley

Date of Action – January 3, 2017

TOWN COUNCIL AGENDA ITEM

DATE: December 29, 2016

DEPARTMENT: Engineering

REQUESTED BY: Jeff Bridges, Town Manager

ITEM: Presentation of Pavement Management Road Resurvey by VHB, Inc.

COST: N/A **BUDGET SOURCE/AMOUNT:** N/A

JUSTIFICATION: The Town contracts with Vanasse, Hangen, Brustlin, Inc, (VHB) to survey the condition of the Town's roads every five years. They have completed the latest road survey and will present the results to the Town Council.

IMPACT IF NOT APPROVED: N/A

TOWN MANAGER COMMENTS: VHB gave the presentation to the Infrastructure / Public Works Committee on December 21, 2016.

ATTACHMENTS:

- a. Pavement Management Road Resurvey, Town of Wethersfield, CT December 2016.

ACTION REQUIRED: Accept the resurvey.

Pavement Management Road Resurvey

Town of Wethersfield, CT

PREPARED FOR

Town of Wethersfield
505 Silas Deane Highway

Introduction

The Town of Wethersfield retained Vanasse Hangen Brustlin, Inc. (VHB) in the autumn of 2016 to update the Town's pavement management database of pavement conditions throughout the Town, determine paving budget needs, and to assist with prioritizing pavement maintenance and rehabilitation needs. VHB has completed similar studies for the Town over the past 20+ years. This resurvey illustrates the changes in pavement condition throughout the Town since 2011, when the most recent study was conducted.

Under the scope of this project, VHB performed a detailed inspection of the condition of the pavement on all Town maintained roads, and has updated the database of this information which can be viewed, edited and analyzed using VHB's RoadManager™ software. Staff in the Engineering Department are able to access this software to manage the Town's pavement management database. The data is linked to the Town's Geographic Information System (GIS), so that thematic maps can be created to display any of the information in the database.

What is Pavement Management?

Pavement management is defined as the practice of planning for pavement maintenance and rehabilitation with the goal of maximizing the value and life of a pavement network. The chart below demonstrates a key concept of pavement management, which is the importance of performing timely low cost pavement preservation treatments to avoid or postpone the need for more costly major repairs.

This report describes the steps taken in this project, the results of the field evaluations, and also compares the results of some potential roadway funding scenarios.

The major sections of this report are:

- Pavement Management Methodology
- Current Pavement Conditions
- Funding Scenarios Explored

Pavement Management Methodology

VHB performed a detailed evaluation of the condition of Wethersfield's 105 miles of Town maintained roads to update the pavement management database. The complete process of identifying the Town road network, evaluating pavement conditions, configuring the database for analysis purposes and finally, the analysis of future funding scenarios is described below.

Network Identification

Network Identification builds an inventory of streets that describe the municipality's complete roadway network. The direction of travel, street length, width, one-way status, ownership, classification, zone and pavement type are among the items identified at this initial phase in the pavement management process. This integral step ensures the streets surveyed are the definitive set to be analyzed.

Pavement Management Section Identification

Once the Network Identification is complete, the field work begins. Each street contains one or more pavement management sections. A pavement management section is generally defined by the limits of previous construction or maintenance activities within each street. Sections are defined by having the same width, typical distresses, one-way status, functional class, etc. The goal is to set up homogenous areas of pavement to aid in planning pavement projects. A street may be one section, or it may be comprised of several pavement management sections, depending on its length and construction history.

Surface Distress Assessment

For each pavement management section, the severity and extent of nine pavement distresses are recorded, then entered into a weighted formula to arrive at a Pavement Condition Index (PCI). The distresses are categorized as base related or surface related distresses. Base related distresses indicate that the pavement structure is inadequate for the existing traffic load. Streets that show significant base related distresses may need to have the pavement base layer strengthened or the street may need a thicker layer of pavement. Surface related distresses are caused by age and weathering of the pavement. Streets that have predominantly surface related distresses are excellent candidates for surface sealing to inhibit further pavement oxidization (the main effect of aging), or thin overlays. Streets with more of the base related distresses will most likely need some full depth patching, structural overlays, reclamation, or reconstruction.

The four base related distresses are:

- non-utility patches
- alligator cracking
- rutting
- distortions

The five surface related distresses are:

- block cracking
- transverse or longitudinal cracking
- bleeding or polished aggregate
- surface wear or raveling
- corrugations, shoving, and slippage

PCI Defined

A PCI was generated for each pavement section evaluated using the distress data collected. PCI is measured on a scale of one hundred to zero, with one hundred representing a pavement in perfect condition and zero describing a road in impassable condition. Each type of observed pavement distress is assigned a deduct value based on the type, severity and extent of the defect. A more severe distress type, such as non-utility patching, has a higher deduct point value than a lesser distress such as transverse cracking. A weighted sum of the deduct points is then subtracted from 100 in order to generate a PCI for each roadway section. In general, base related distresses are weighted more heavily than surface related distresses.

The Five Treatment Bands

Broad PCI ranges are used to group individual pavement sections into five treatment bands. Treatment bands are a useful tool to summarize data on a Town-wide basis. The goal is to gain a broad understanding of the existing conditions in simple yet meaningful terms. Table 1 describes the treatment bands used for analysis in Wethersfield.

Table 1 Treatment Band Descriptions

TREATMENT BAND	PCI	Description
Do Nothing	93-100	In need of no immediate maintenance.
Routine Maintenance	86-92	May be in need of crack sealing or minor localized repair.
Preventive Maintenance	69-85	Pavement surface may be in need of surface sealing, partial or full depth patch, and/or crack sealing.
Structural Improvement	51-68	Pavement surface structure in need of added strength for existing traffic. Typical repairs are overlay with or without milling.
Base Rehabilitation	0-50	In need of base improvement. Typical repairs are reclamation or full depth reconstruction.

Do Nothing

The do nothing category includes roads which are in need of no immediate maintenance. These roads are in excellent condition and existing distresses generally do not need to be addressed.

Sherburne Road, PCI: 100

Routine Maintenance

Routine maintenance activities are those which are taken to correct a specific pavement distress. Routine maintenance usually addresses localized pavement defects and includes activities such as crack sealing and patching.

Southwell Road, PCI: 89

Preventive Maintenance

Preventive maintenance activities are those which are performed at planned intervals to preserve the pavement. A street by street level analysis is recommended to determine which treatment is most appropriate. In Wethersfield, more extensive crack sealing and patching may be suitable to preserve the life of roads in this category. However, thin overlays (1" or 1 ½" thickness) may be appropriate on a case by case basis.

Bunce Road, PCI: 75

Structural Improvement

Structural improvement includes the work necessary to restore the pavement to a condition that will allow it to perform satisfactorily for several years. Generally a structural improvement will consist of milling the existing pavement down and applying a new Hot Mix Asphalt overlay of partial or full pavement thickness, maintaining existing grades. When the existing grade can be raised, an overlay can be placed on the existing surface.

Structural improvements also include the work necessary to prepare the pavement for an overlay, either with or without milling. The major activities involved in the preparation process are:

- Partial depth patching;
- Full depth patching;
- Crack sealing;
- Hot Mix Asphalt Leveling course.

Dale Road, PCI: 57

Base Rehabilitation

Base rehabilitation utilizes one of two methods:

- Reclamation;
- Reconstruction.

Typically in Wethersfield, reclamation will be used. On a project to project basis, reconstruction may be used. Reclamation is the process of rehabilitating existing deteriorated pavements. The existing pavement and base, subbase, and possibly subgrade are pulverized and blended to create a homogenous pavement base. This reclaimed pavement base is then paved with a new Hot Mix Asphalt surface.

Wheeler Road, PCI: 46

Current Pavement Conditions

VHB conducted the field evaluation of pavement conditions in September of 2016. The average PCI for Wethersfield's road network at the time of the survey was **78**. The following chart shows the distribution of miles of roadway in groups of 5 PCI point increments.

Figure 1 Current PCI Distribution

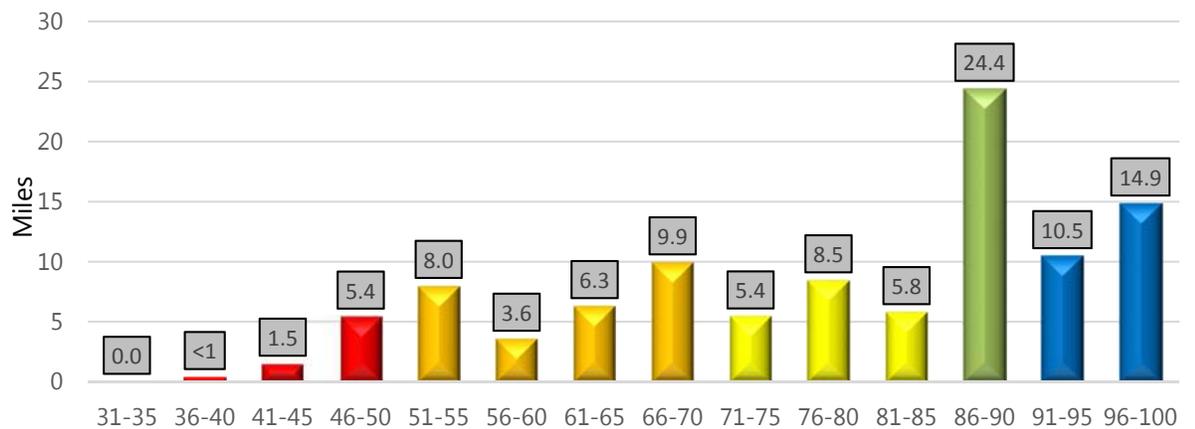

Figure 1 shows that the Town has roads in a wide variety of conditions. There is a large group of roads with PCI's between 86 and 92, this indicates that a number of roads will require routine maintenance. However, with the number of roads in the lower PCI bands, a variety of structural improvement and base rehabilitation alternatives will be appropriate to rehabilitate these deteriorated pavements. Figure 2 shows the information above grouped by the five treatment bands described earlier.

Figure 2 Current PCI Distribution – Grouped by Treatment Band

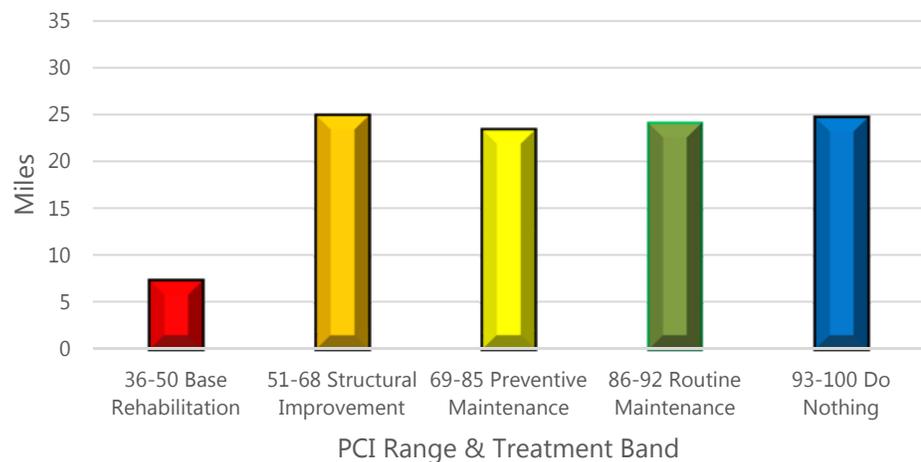

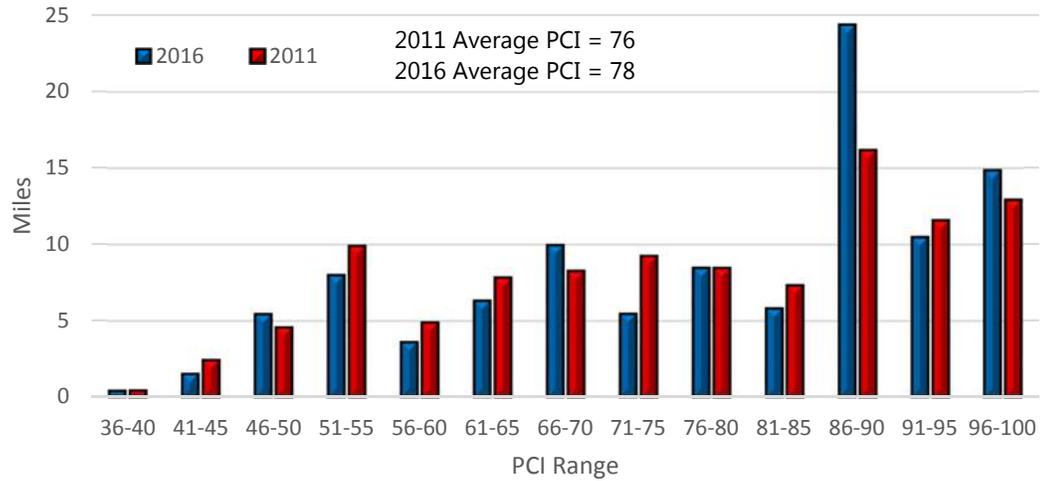

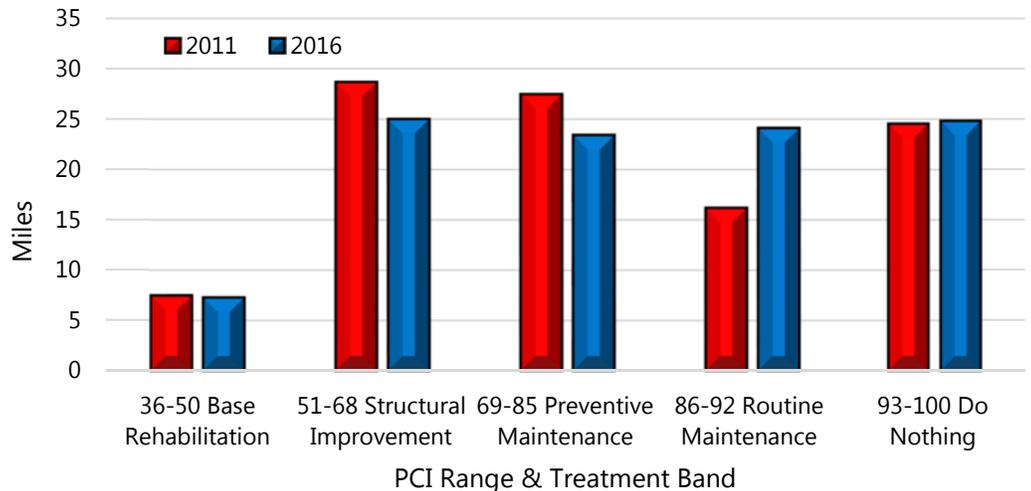

Figure 3 Comparison of 2011 & 2016 PCI Distribution

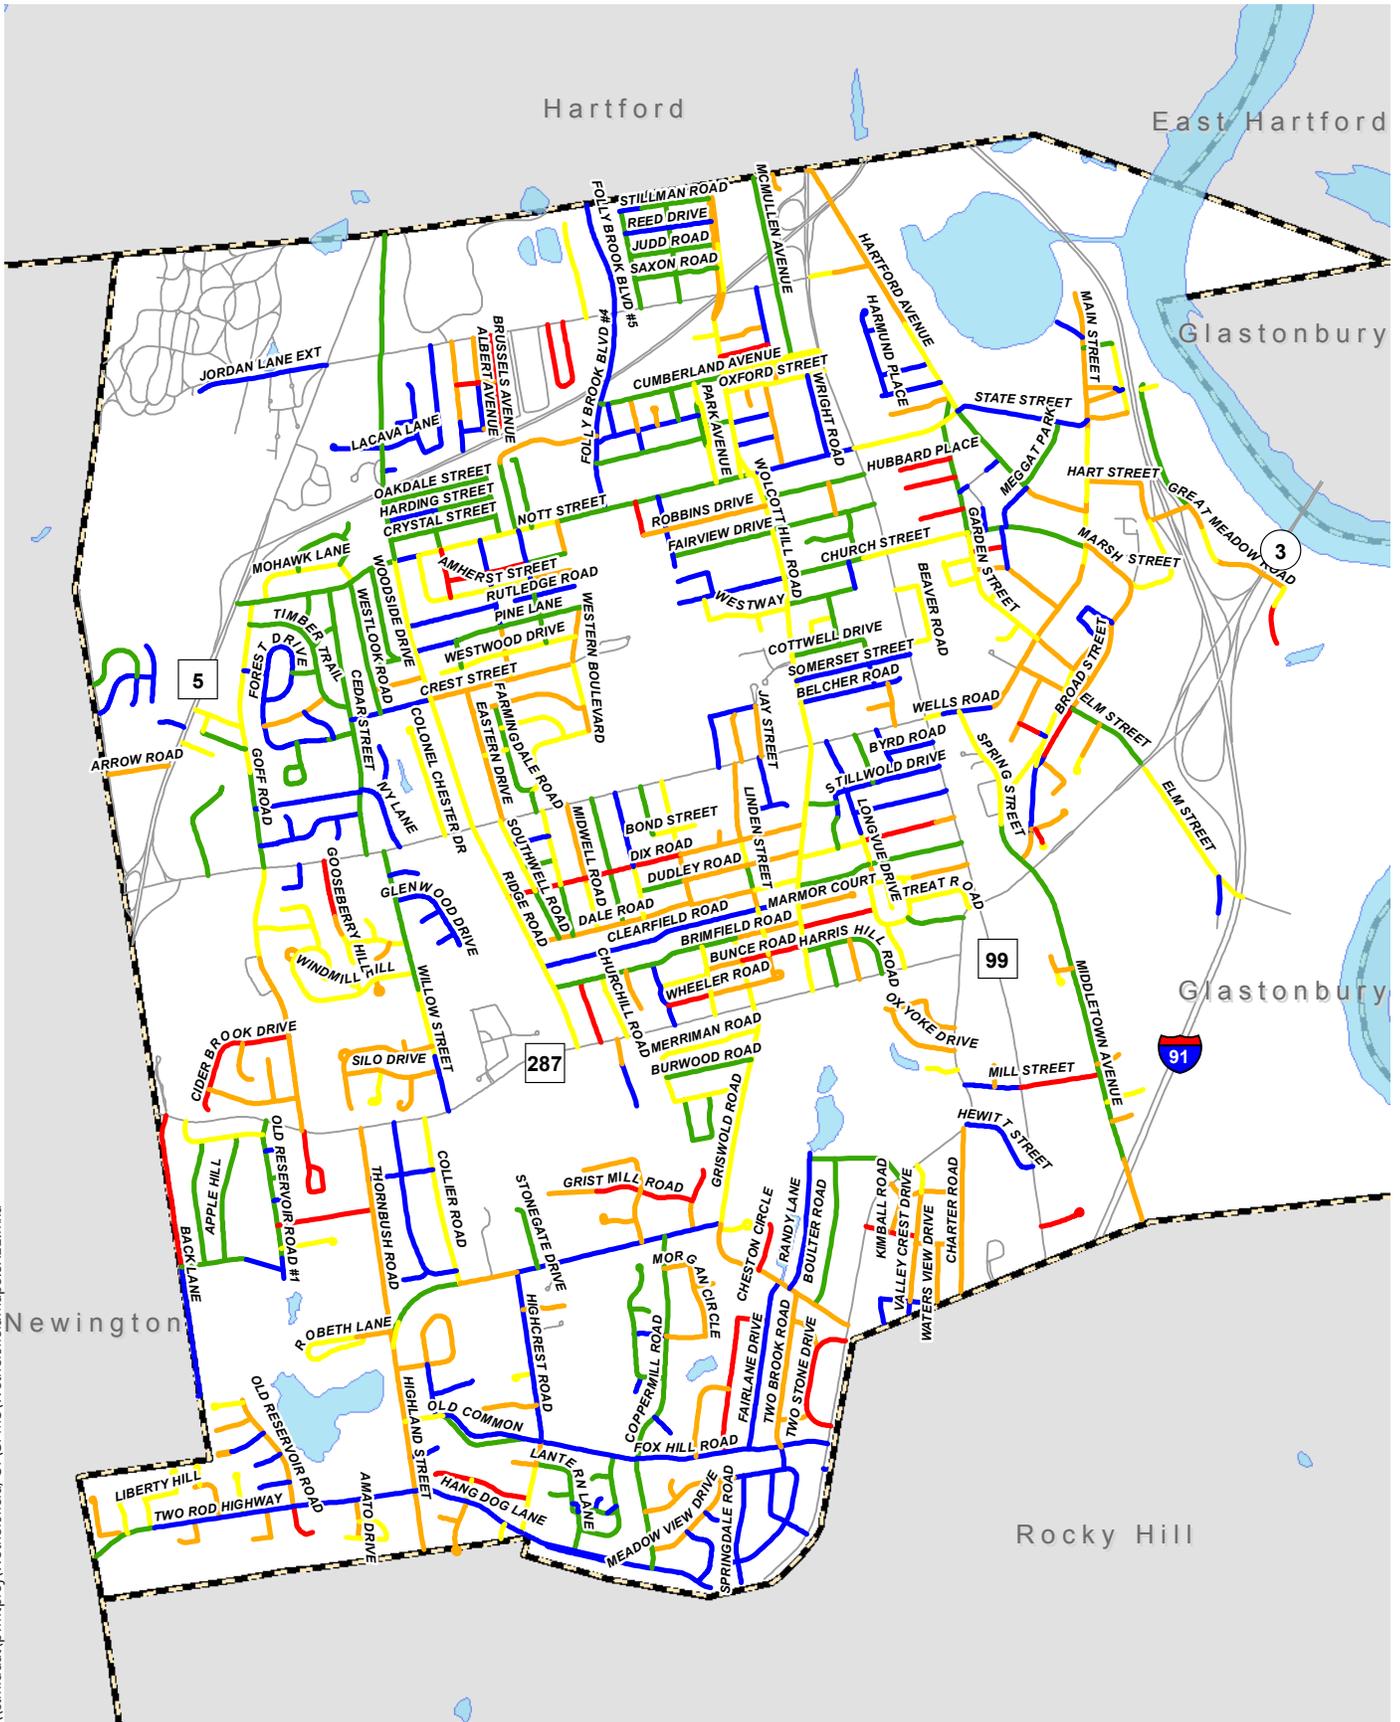

VHB conducted a similar study for the town in 2011. Figure 3 shows the difference in PCI distribution between the pavement conditions in 2011 and current conditions in 2016. In 2011 the average PCI was 76, with a fairly uniform distribution of PCI's. As mentioned above, in 2016 the average PCI is 78, with the largest grouping of PCI's between 86 and 92. With less roadways requiring base rehabilitation and structural improvement, and more roadways needing some level of maintenance or nothing at all, the overall condition of Wethersfield's road network has improved over 5 years. Figure 4 shows the information above grouped by the five treatment bands described earlier.

Figure 4 Comparison of 2011 & 2016 - Grouped by Treatment Band

The following page is a map of the current pavement condition for Town maintained roads.

Pavement Condition Index Map

Backlog of Work

By applying the five treatment bands described earlier and the unit costs shown in Appendix A to Wethersfield's street network, the following table was developed. This table details the miles and dollars associated with each treatment band for the conditions at the time of the evaluation.

Table 2 Current Backlog of Needs by Treatment Band

Treatment Band	Dollar Value	Miles
Do Nothing	-	24.8
Routine Maintenance	158,632	24.1
Preventive Maintenance	927,056	23.4
Structural Improvement	10,205,056	25.0
Base Rehabilitation	4,110,823	7.3
Grand Total	\$ 15,401,567	104.6

The Town requested that VHB evaluate the option of replacing all of the curbing on a street that is being milled and overlaid when the curbing is in fair to poor condition. As a cost saving measure in past years, the approach has been to only replace the curbing in the poorest condition. Historically, on average, approximately 45% of the curbing on a street has been replaced when the street is milled and overlaid. If the Town were to adopt a policy of replacing 100% of the curbing on streets that are being milled and overlaid, there would be an approximate 13.5% increase in the cost of the mill and overlay work, and therefore a reduction in the amount of annual roadway improvements. This would also result in an increase of \$1.44 million in the estimated backlog listed above.

Figures 6 and 7 on the following page show that while base rehabilitation represents only 7% of the outstanding work by mileage, it represents 27% of the total backlog of outstanding work by cost. Base rehabilitation is the most expensive category of street repair.

Also of note, approximately 69% of the Town's miles are in need of routine maintenance, preventive maintenance, or nothing at all. While this accounts for the majority of needed work by mileage, it represents only 7% of the cost of needed work. Sealing and protecting the pavements in good condition can be the most cost effective way of preserving the overall condition of the Town's roads. Figure 6 also demonstrates that a continued mill and overlay program will be needed to address the structural improvement needs, which comprise 66% of the cost of needed work.

Figure 6 Backlog of Outstanding Work by Mileage

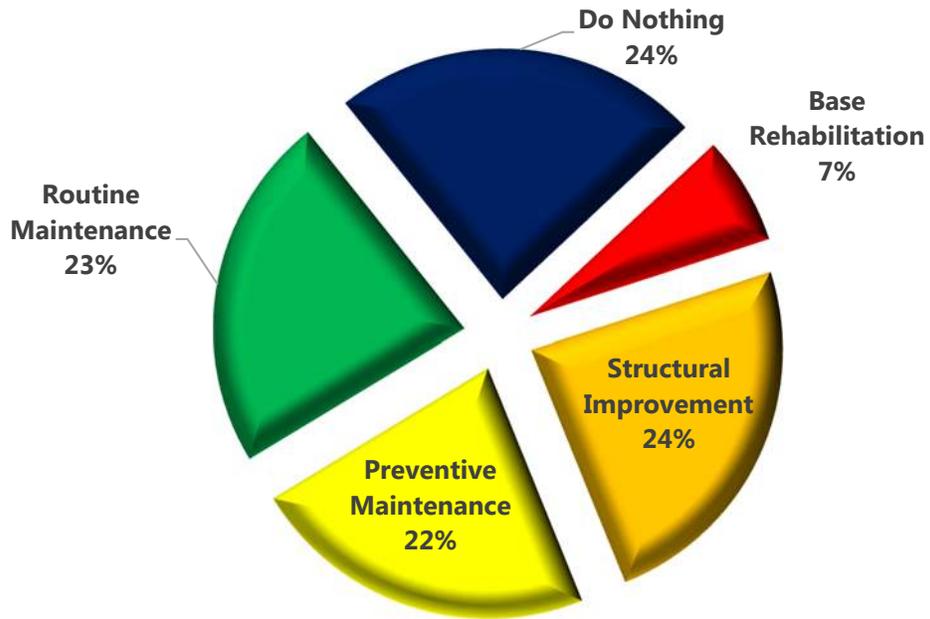

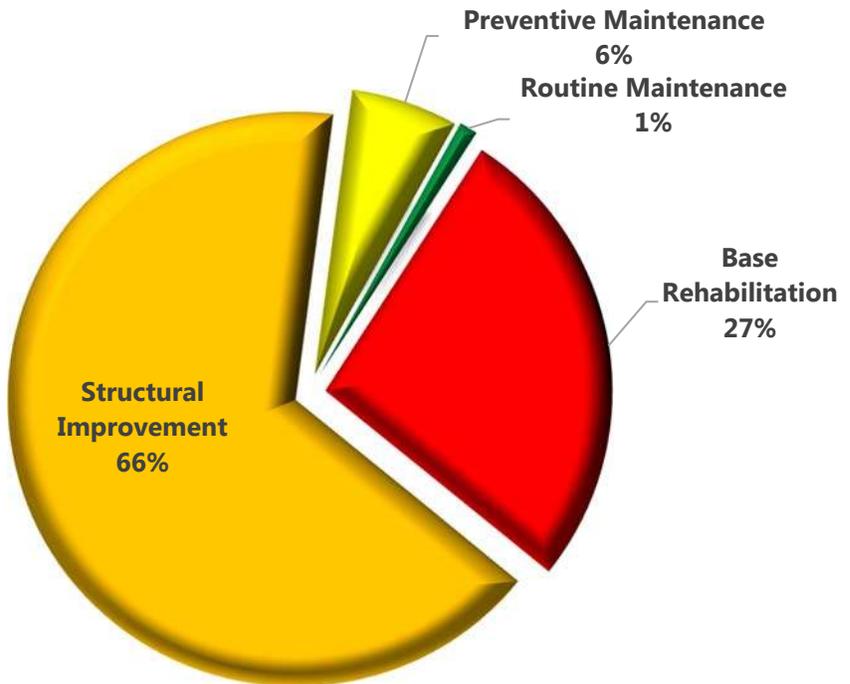

Figure 7 Backlog of Outstanding Work by Cost

Appendix C details the backlog and lists PCI, repair alternative, and estimated cost for each pavement section.

Funding Scenarios Explored

In recent years, the Town has allocated \$1.5 million annually to roadway improvements, including approximately \$200k of LOCIP funding. Typically, \$1.3 million has been invested into resurfacing work each year which includes milling and overlay, crack sealing and patching. Approximately \$200k has been reserved for larger roadway reconstruction projects which are completed every few years.

VHB compared the predicted effects of three potential funding scenarios for future **resurfacing work**:

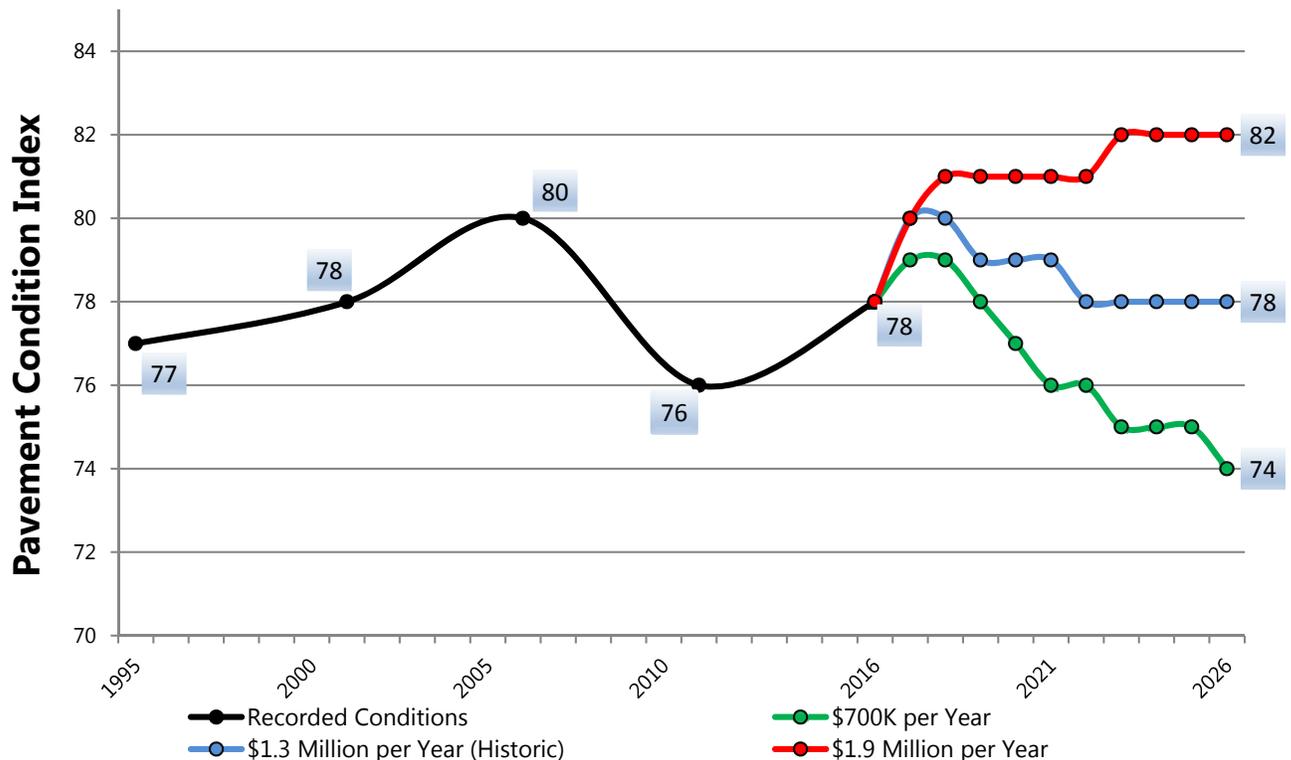

\$ 700k per Year – An annual investment of \$700k is projected to result in a decrease in the average PCI level to 74 over 10 years.

\$ 1.3 Million per Year – A continued annual resurfacing investment of \$1.3 million is projected to maintain the current average PCI level of 78 over 10 years.

\$ 1.9 Million per Year – An annual investment of \$1.9 million is projected to increase the average PCI level to 82 over ten years.

The recorded average pavement condition across Wethersfield, presented in Figure 8, shows that from 1995-2016 the average pavement condition has been maintained. The right side of Figure 8 shows the projected pavement conditions for the three funding scenarios described above.

Figure 8 Past and Future Network Condition

Concluding Remarks

The Wethersfield pavement management system gives Town decision-makers a picture of existing roadway infrastructure conditions and a dollar estimate to improve streets in poor condition while protecting those pavements already in good condition. This also allows Town staff to logically and systematically integrate results of this plan with other critical master plans in Town. It is recommended that the Town:

- Continue to budget adequate funds to maintain or improve pavement conditions and protect the investments that have been made for several years.
- Perform low cost preservation treatments where appropriate to get the greatest value from the available funding.
- Continue its mill and overlay program focused on the work needed on streets in the structural improvement band, which represents 66% of the backlog of pavement improvement needs in Wethersfield.
- Develop a pavement design to determine an appropriate pavement section for highly traveled arterial/collector roads before major rehabilitation projects.

The Pavement Management System that the Town uses is a planning tool, with primary functions of determining the funding levels required to achieve Town wide condition goals, and to identify candidate road projects to achieve those goals. Any project list generated by the system needs to be reviewed by the Town Engineering staff and adjusted based on numerous factors, including coordination with utility work and geographic grouping of projects.

Recommendations – Pavement Management

- Budget adequate funds to achieve pavement condition goals
- Make timely maintenance repairs
- Repair localized base problems before applying an overlay
- Address major rehabilitation needs as funding allows
- Develop a multi-year road program
- Coordinate with local utilities to perform upgrades and repairs in advance of projected construction projects
- Perform a project level analysis consisting of sub-surface testing and develop an appropriate pavement design prior to major rehabilitation projects to ensure proper life of a new pavement
- Provide for construction inspection at the plant and in the field to ensure quality material is provided and quality work is being performed
- Update database to reflect work that is done (maintains accuracy of system)
- Update pavement conditions at a minimum of every 3-5 years or 25% of the road network each year
- Track specific and overall conditions periodically
- Evaluate funding levels periodically

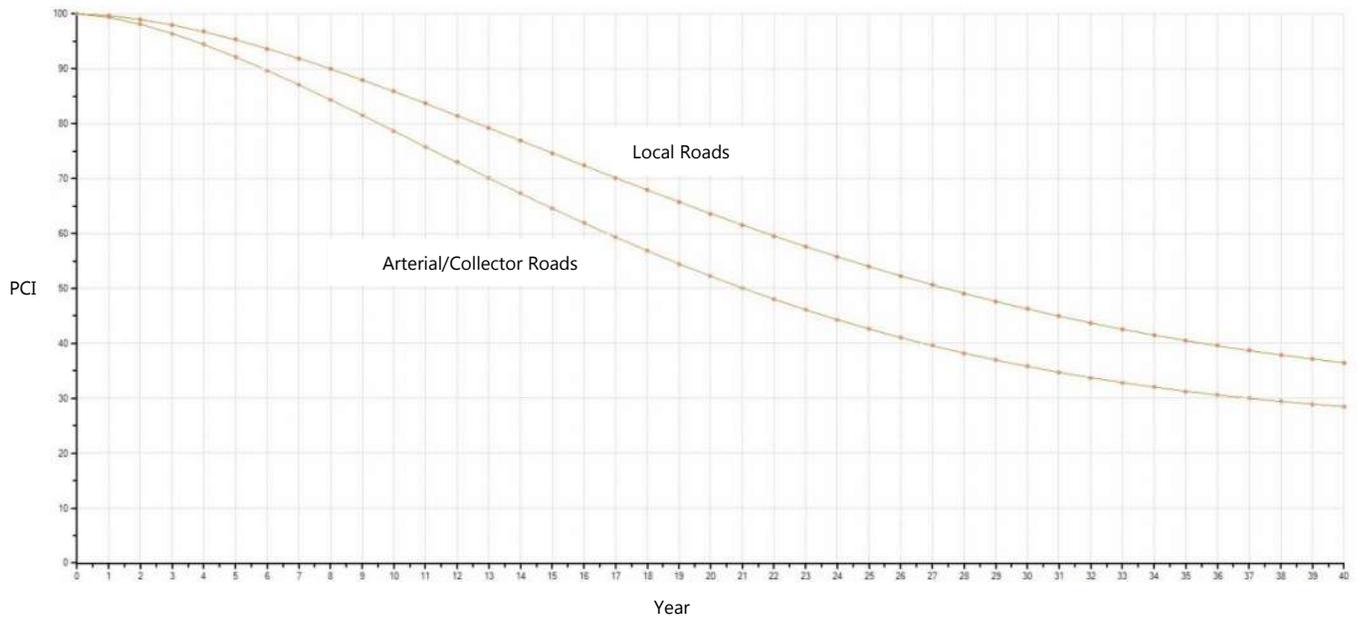

Appendix A: Unit Costs

Name	Unit Cost (\$/SY)
Crack Seal	\$0.38
Crack Seal and Patch	\$1.66
Thin Overlay	\$11.62
Mill & Overlay - Local	\$22.00
Mill & Overlay - Arterial/Collector	\$25.00
Reclaim - Local	\$33.20
Reclaim - Arterial/Collector	\$36.52

The unit costs above were developed using historical cost information from past projects in Wethersfield. The rate of inflation experienced for mill and overlay projects, which have comprised the majority of the Town's road program recently, has been used to estimate the rate of inflation for other types of treatment.

As shown above, the unit costs for work on arterial and collector roads are slightly higher than the unit costs for local residential roads. This higher cost is representative of the thicker pavement section that is often required to handle the truck and other traffic on more heavily traveled roads. The higher unit cost may also include sub-surface testing and pavement design services.

Appendix B: Deterioration Curves

The curves shown above are used in the pavement management software used by the Town to estimate the rate of deterioration when projecting future conditions. The curve with the steeper slope is used to project future conditions of more heavily traveled roads. The curve with the more gradual slope is used to project future conditions for local, less traveled roads.

TOWN COUNCIL AGENDA ITEM

DATE: January 03, 2017

DEPARTMENT: Social and Youth Services

REQUESTED BY: Kathleen A. Bagley, Director, Social and Youth Services

ITEM: Capital Area Substance Abuse Council (CASAC) Grant in the amount of \$5,342 to support the Local Prevention Council in Wethersfield which is the Wethersfield Youth Advisory Board.

JUSTIFICATION: This grant provides funds to maintain a local, municipal-based alcohol, tobacco and other drug prevention council. The Wethersfield Youth Advisory Board serves as the prevention council. The funds are used to facilitate the development of prevention initiatives for students in Wethersfield. These initiatives include the Silas Deane Middle School after school enrichment programs; attendance by students at a youth leadership conference, and the needs assessment survey for middle and high school students. The Town receives these funds and only has to provide in kind staff time to plan and implement the programs.

COST: \$11,800.

BUDGET SOURCE/AMOUNT: \$5,432 grant, \$6,458 program income (see grant application for details).

IMPACT IF NOT APPROVED: Town will not receive these funds to provide prevention programs for students in Wethersfield.

DEPARTMENT HEAD COMMENTS: This grant provides \$5,342 to help support programs aimed at providing prevention initiatives for students in Wethersfield. The Town has received this grant in previous years and it has been used to fund similar initiatives - the afterschool programs at the middle school, guest speakers on prevention topics for parents and students & youth leadership conferences. The Town's contribution for the grant is time allocated from the Youth Development Manager and other staff to coordinate these programs. The balance of the program expenses is funded by other grants and partnering with area towns on the regional programs (youth leadership conference).

TOWN MANAGER COMMENTS: Concur with Director Bagley

ATTACHMENTS: Funding Application for Grant to Support Local Prevention Council.

ACTION REQUIRED: Motion to authorize the Town Manager to apply and accept a CASAC Grant for prevention programs for the students in Wethersfield for an amount of \$5,342.

Funding Application for Grant to Support Local Prevention Council

1	Application Date 12/1/16	Funding Start Date July 1, 2016 - June 30, 2017
2	Applicant Agency (Legal Name & Address) Town of Wethersfield Department of Social and Youth Services 505 Silas Deane Highway Wethersfield, CT 06109	FEIN 06692130
3	Has a permanent Local Prevention Council been established? <input type="checkbox"/> No <input checked="" type="checkbox"/> Yes	
4	Local Prevention Council name and address Wethersfield Youth Advisory Board 505 Silas Deane Highway Wethersfield, CT 06109	
5	LPC Contact Person (Programmatic) Erica Texeira MS, LMFT	Telephone Number 860-721-2977
	Title Assistant Director of Social and Youth Services	Fax Number 860-721-2935

Funding Application for Grant to Support Local Prevention Council

11	<p>How different cultures will be addressed in all services (see Appendix B)</p> <p>All students are expected to treat each other with respect at all times. In all programs with youth we talk about family, cultural and ethnic traditions as part of group process. This serves to be inclusive and enables youth leaders to be sensitive to various needs and values. When working with parents we use the same techniques and values that are employed with youth.</p>

TOWN COUNCIL AGENDA ITEM - BID/RFP AWARD

DATE: 12/27/2016

DEPARTMENT: Physical Services

REQUESTED BY: Sally Katz, Physical Services Director

ITEM: Unleaded Fuel

TOWN BID/RFP #:

STATE CONTRACT #: CRCOG #651

BID/RFP DATE: Jan 2017-Dec 2017

TERM: 1 YR

RENEWALS: NO

TERMS OF RENEWAL: NO

COST:

	UNLEADED	GROSS EARNINGS TAX	LUST TAX	FEDERAL SPILL TAX	TOTAL PER GALLON
2017	1.7813	8.81%	0.001	0.0019	1.94
2016	1.4441	8.81%	0.001	0.0017	1.57

BUDGET SOURCE/AMOUNT: 15207 53301 Physical Services Budget/\$143,560 per **calendar year**.
1/1/2017-6/30/2017 = \$71,780

JUSTIFICATION: Fueling town vehicles.

IMPACT IF NOT APPROVED: The unleaded fuel rate will fluctuate with the market. Projections are that fuel costs will be increasing.

DEPARTMENT HEAD COMMENTS:

CROG received submissions from 6 companies to bid on unleaded fuel. Unleaded fuel is bid on a calendar year schedule. Dime Oil was the lowest bidder over East River by .0005. Request to lock in with Dime Oil for unleaded fuel from 1/1/2017-12/31/2017.

TOWN MANAGER COMMENTS: Concur with Director Katz.

ACTION REQUIRED: Motion to award CRCOG Bid #651 to Dime Oil Co., Unleaded Gasoline for calendar year 2017.
